TIME & ATTENDANCE SYSTEM

People are the most valuable asset and their time is just that much a valuable resource. To avail the benefits of time-attendance policies, the biometric device must be chosen wisely. Managing people's attendance and timings is a basic, yet critical challenge for any organization. One cannot underestimate the complexity of time and attendance due to organizational structure, hierarchy and disparate operational needs. It is very challenging to capture time and attendance rules of an organization and automate them because of the diversity in attendance, timings and leave policies from one location to another, from one department to another and from a person to person. At **NISHITEK Computers** we provide Time-Attendance solution meets these diverse requirements by offering a superlative range of flexibility in attendance policies, configuration, integration and report generation. Time-attendance devices can be seamlessly integrated with any third-party payroll system.

Time attendance devices are installed at entry and exit points to capture user entries and exits. These devices are superlative in designs, versatile in functions and robust in performance. They support multiple credentials such as Palm Vein, Fingerprint and RFID Card, multiple connectivity options and SMS/Email notifications fulfill the time-attendance requirement of all types of organization.

Mark Attendance Using Multiple Credentials

- Fingerprint Time-Attendance
- Palm Vein based Time-Attendance
- RFID based Smart Cards
- RFID based Proximity Cards

Integration with Payroll, ERP or HRM Software

- Using API, Database to Database or Export Template Methods
- For Faster and Accurate Process

PABX TELEPHONE SYSTEMS

The word PBX is the abbreviation for Private Branch Exchange. It is a private telephone network which is used within an organization. This system allows the users to communicate within their organization or with the outsiders. This communication is enabled by channels like analog or voice over IP. A PBX enables free calls between those using it and also allows many phones compared to physical phones lines. It also offers impressive features like voicemail, call recording and also call queues. PBX are designed so that they can allow connection between, modems, fax machines, telephones and other organization's extensions which may be private or public networks.

Are you considering a PBX system for your business in UAE? Begin the process of installation by choosing the right company to do this for your business. Max Home Security should be the first company to consider. We offer best PBX system, and more so we install them. You don't have to worry about the maintenance because that is another field we are good at.

How PBX system can help your business

Efficient communication is the critical factor in the success of any organization. Having the right telecommunication network installed in your company can be of the great boost to your productivity and the efficiency. PBX systems have different call handling features that can improve employees productivity and also give your business communication a look that is professional. Let discuss the benefits that come along with the installation of the PBX systems to your business.

PBX Systems allows Find Me Feature

For the business that deals with mobile workers or an employer who is always traveling, this feature is so helpful to them. Find me follow me features makes sure that a call meant for someone reaches her/him at the right time irrespective of the location they are the time the call is received. Routing incoming calls to several phone numbers at any moment, and any places are made possible by this feature.

Apart from these standard features, there are other features companies can enjoy from PBX systems. Multiple user connectivity, remote employee support, auto attendant and voicemail transcription are among the advanced features a business can experience.
